Application

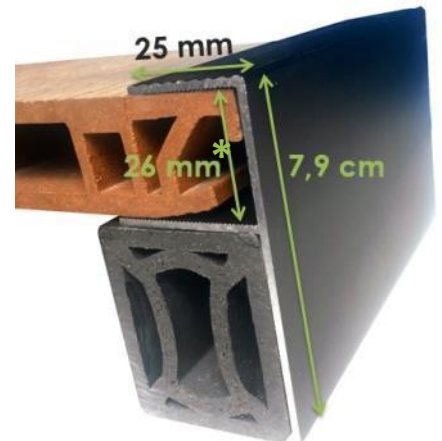

Angle bar as a starting profile:

Perfect when you use clips to install your deck.

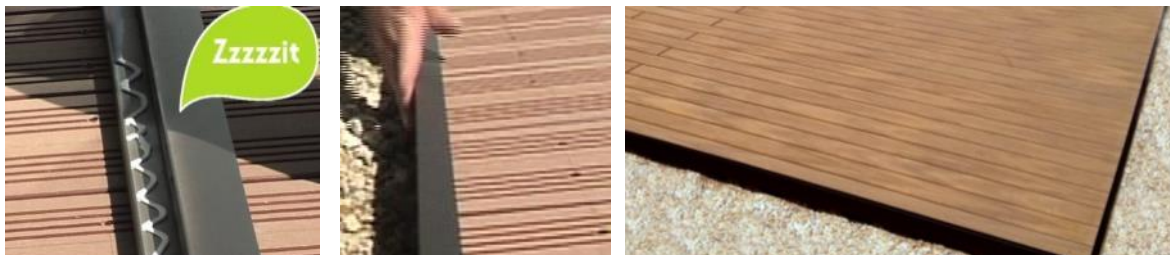

1. Drill, countersink and screw the aluminum angle bar on the joist (stainless steel screws countersunk head min. 3x15).
2. Slide the board into the angle bar keeping an expansion spacing of 10mm on the interior of the angle bar.

Cornière alu Optima

*26 mm for Optima
22 mm pour Classik

Angle bar as a finishing profile:

1. Measure the length of angle bar required and cut as necessary.
2. Glue with MS55 glue the angle bar then insert it in the boards.
3. Tap all along the angle bar to ensure it is properly fitted in place.
